

What makes the SeceuroGlide Excel so Secure?

The **SeceuroGlide Excel** was the first roller garage door in the UK to receive LPS 1175 SR1 - the rigorous burglary resistance standard from the Loss Prevention Certification Board (LPCB).

To achieve a Level 1 security rating, the Excel had to pass a series of timed attacks which go beyond the requirements of garage doors with lower security ratings.

This included a more vigorous, violent attack using bodily force and a range of hand tools. Unlike lower security ratings, which are 'stealth' tested, there were no restrictions on how much noise could be made during the test.

See the SeceuroGlide Excel being put through its paces in a series of cut, lift and push attack tests, replicating break-in methods used by official testing bodies:

- Maximum of one-minute attack time to gain forced entry
- Maximum test duration of ten minutes

Invest in a quality, secure garage door

By choosing the SeceuroGlide Excel, you are investing in the most secure garage door. Click on each image to watch the videos, and see how an inferior generic roller garage door also performed – failing all three attack tests in less than sixty seconds!
